DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The preamble implies two different optical components, as recited "An optical component fixing method using an adhesive to fix an optical component", underlined should read to fix the optical component.

Claims 5 and 15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 5 and 15, further recite "the optical component is a component of a solid state laser apparatus" which fails to further limit the method steps as set forth in claims 2,12 to 14.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2-5 and 7-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kitaoka et al (US 2001/0053167).

Regarding claims 2-5 and 7-15.

Application/Control Number: 09/534,034

Art Unit: 2828

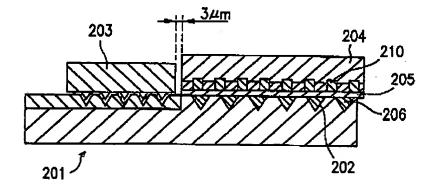

In figure 16 Kitaoka et al illustrates a laser system having a submount (201) with grooves (202) filled with adhesive (206), where a planar optical waveguide (204) is fixed, as described in example 9 page 12 [0162] – [0169].

Kitaoka et al does not disclose the particular dimensions of the pitch, depth or flatness of the grooves.

The "person having ordinary skill" in this art has the capability of understanding the scientific and engineering principles applicable to the claimed invention. Thereby, would have the capability of providing the submount with grooves using any of the well known techniques, such as scoring or dicing. Furthermore, it is a well-known fact in any art that scoring will enhance adhesion. It is considered discovering working ranges of the dimensions of the pitch, depth and flatness involves only routine skill in the art.

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide working ranges or optimum ranges for the pitch, depth and flatness of the grooves in the laser system of Kitaoka et al because it would enhance adhesion of the optical element.

FIG. 16

Art Unit: 2828

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Armando Rodriguez whose telephone number is (703) 308-6218. The examiner can normally be reached on 10-hour day / M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Ip can be reached on (703) 308-3098. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7721 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-

4881.
